INTRODUCTION

Python is a general/multi purpose high level programming language. It was developed by Guido Van Rossam in 1989, and made available to the public in 1991. The official Date of Birth of Python is Feb 20th 1991. .py is the python file extension. Python programs are interpreted line by line, without directly compiling into machine code. Hence it is slower than C or C++. It's concise and easy to read. Whatever you want to do, Python can do it; From web development to machine learning to data science. Here I am trying to create notes for Python from scratch to advanced level as I proceed.
